DETAILED ACTION

The disclosure is objected to because of the following informalities:

The specification at paragraph [0014] under heading Brief Description of Drawings describes Figs. 2a-2d and fails to describe Fig. 2e.

Appropriate correction is required.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Pan et al.

Regarding claim 1, Pan et al. (6,207,538) teaches a semiconductor device comprising a first implant region 18 having a first conductivity type and a second implant region 22 having a second conductivity type wherein the first and second implant regions are self-aligned with respect to one another. See Figs. 2-6, column 4 line 54 to column 6 line 51, particularly Fig. 5 wherein region 22 is self-aligned to region 18 by employing mask 20 corresponding to an image reversal of mask 14 in Fig. 4 without lithography). Regarding claim 2, the first implant region 18 is formed following a lithographic patterning step (column 4 line 37-41) and the second implant region 22 is formed following a non-lithographic, image reversal step (column 5 line 11 to column 7 line 6 line 50).
